

200 MAX and 200 HT Shield

Installation Instructions

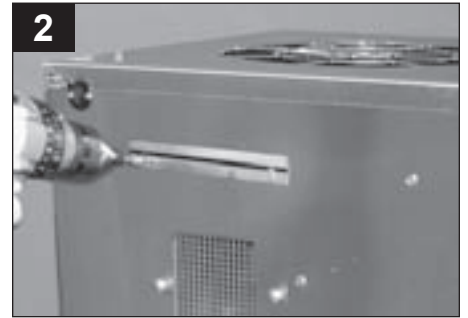

Read and Save These Instructions

Items included with kit:
 4 brackets, 1 shield

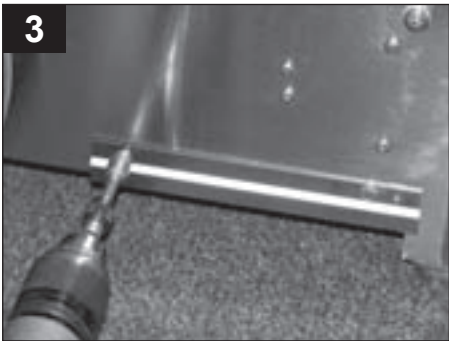

Tools needed:
 5/16" nut driver/wrench

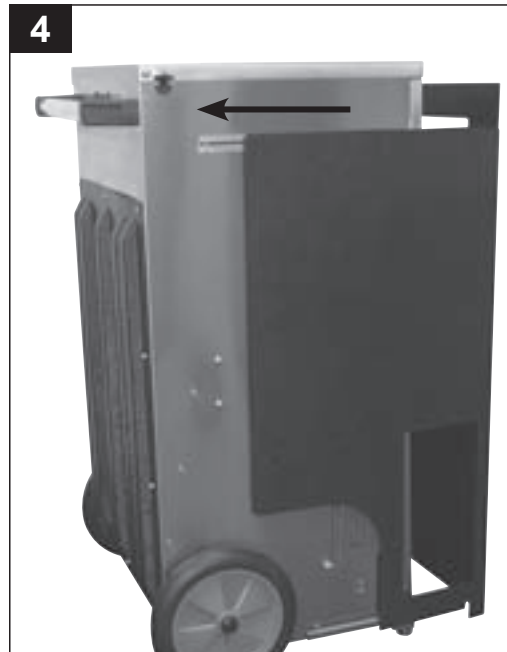

Bracket orientation to create top and bottom tracks

Remove and save rear 2 of 3 top screws. Place mounting bracket in correct position for **upper track** and using existing screws. Repeat on opposite side.

Remove and save bottom 2 screws. Place mounting bracket in correct position for **lower track** and install using existing screws. Repeat on opposite side.

Slide shield over the track and push shield towards unit.

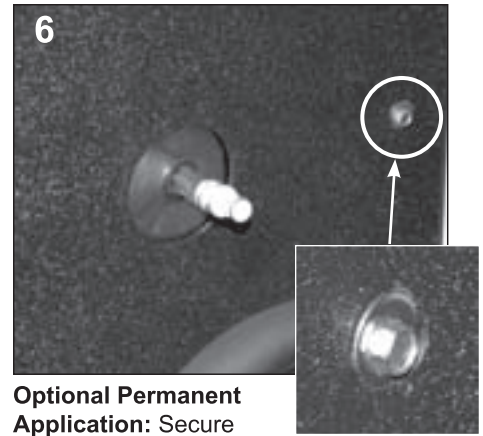

Top placement

Bottom placement

Correctly positioned shields on units.

Optional Permanent Application: Secure shield to unit through side clearance holes. Remove screw and reattach (may need a washer—not supplied).

Innovative Design, Exceptional Durability, Easy Installation!

The Only Choice for Restoration Professionals

Designed with the Restoration Industry in mind, the Phoenix **SHIELD** provides extra protection for your stainless steel dehumidifiers. The **SHIELD** is an attractive and durable thermal-formed, ABS plastic armor that protects against damage on the job, during transportation or while in storage. The **SHIELD** is the ideal way to protect your investment when it leaves your facilities by adding the scratch-resistant durability of thermal-plastic armor to your 200 MAX or HT.

The Phoenix **SHIELD** easily installs in minutes so you can use it as a permanent protective covering, or remove it when you reach the job site to show off that distinguished Phoenix stainless steel construction. The **SHIELD** is also the perfect way to make a “battle-scarred” Phoenix look like new. Just attach four brackets using existing fasteners and holes on the Phoenix and the **SHIELD** is installed instantly with NO drilling required.

FEATURES:

- Protects your stainless steel dehumidifier
- Proven™ innovative engineering design
- Easy Installation - no drilling required
- Removable or Permanent
- Prevents damage to your inventory while transporting and in storage
- Prevents screw head scratches
- Durable, scratch-resistant construction
- Gives 200 MAX or 200 HT a new “clean” look
- Conceals scratches and dents on 200 MAX and 200 HT
- Perfect for rental units

THE PHOENIX SHIELD

Just attach four brackets in existing holes in the unit on each side and the “**SHIELD**” can be installed in minutes.
